

Exception

```
classDiagram
    class Exception
    class ParseError["smacc_viewer.xdot.xdot._qt.ParseError"]
    ParseError --|> Exception
```

The diagram illustrates a class hierarchy. At the top is a class named 'Exception', represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. Below 'Exception' is a class named 'smacc_viewer.xdot.xdot._qt.ParseError', represented by a rectangle divided into three horizontal sections. The top section contains the class name. The middle section lists four attributes: '+ msg', '+ filename', '+ line', and '+ col'. The bottom section lists two methods: '+ __init__()' and '+ __str__()'. A blue arrow with an open triangular head points from the 'smacc_viewer.xdot.xdot._qt.ParseError' class up to the 'Exception' class, indicating that 'smacc_viewer.xdot.xdot._qt.ParseError' inherits from 'Exception'.

smacc_viewer.xdot.xdot
_qt.ParseError

+ msg
+ filename
+ line
+ col

+ __init__()
+ __str__()
