

```
boost::statechart::  
event< EvWaypoint150  
< TSource, TObjectTag > >
```

The diagram shows two class boxes. The top box is for `boost::statechart::event< EvWaypoint150 < TSource, TObjectTag > >` and the bottom box is for `smacc::EvWaypoint150 < TSource, TObjectTag >`. A blue arrow with an open triangle head points from the bottom box to the top box, indicating that `smacc::EvWaypoint150` inherits from `boost::statechart::event`.

```
smacc::EvWaypoint150  
< TSource, TObjectTag >
```

```
+ waypointIndex
