

```
boost::statechart::  
event< EvTrue< TSource,  
      TObjectTag > >
```

The diagram shows two class boxes. The top box is white and contains the text 'boost::statechart::event< EvTrue< TSource, TObjectTag > >'. The bottom box is gray and contains the text 'smacc::EvTrue< TSource, TObjectTag >'. A blue arrow with an open triangle head points from the bottom box to the top box, indicating that smacc::EvTrue inherits from boost::statechart::event.

```
smacc::EvTrue< TSource,  
             TObjectTag >
```
